## North Carolina Marketplace

<b>DRUG NAME</b>	<b>Praluent (alirocumab)</b>
BENEFIT TYPE	Pharmacy
STATUS	Prior Authorization Required

Praluent, approved by the FDA in 2015, is a PCSK9 (proprotein convertase subtilisin kexin type 9) inhibitor indicated to 1) reduce the risk of myocardial infarction, stroke, and unstable angina requiring hospitalization in adults with established cardiovascular disease, 2) as adjunct to diet, alone or in combination with other low-density lipoprotein cholesterol (LDL-C)-lowering therapies in adults with primary hyperlipidemia including heterozygous familial hypercholesterolemia (HeFH) to reduce LDL-C, 3) as an adjunct to other LDL-C-lowering therapies in adult patients with homozygous familial hypercholesterolemia (HoFH) to reduce LDL-C, and 4) as an adjunct to diet and other LDL-C-lowering therapies in pediatric patients aged 8 years and older with HeFH to reduce LDL-C.

PCSK9 binds to LDL receptors (LDLR) in the liver to promote their degradation. Inhibiting PCSK9 from binding LDLR increases the number of them available to clear LDL from the blood, which reduces LDL-C levels.

Praluent (alirocumab) will be considered for coverage when the following criteria are met:

### Homozygous Familial Hypercholesterolemia (HoFH)

For **initial** authorization:

1. Member is at least 18 years of age; AND
2. Medication must be prescribed by or in consultation with a lipid specialist, cardiologist, or endocrinologist; AND
3. Member has a diagnosis of homozygous familial hypercholesterolemia (HoFH) confirmed by one of the following:
  - a) Genetic testing confirmation of two mutant alleles in the LDLR, Apo-B, PCSK9, or LDLRAP1 gene locus; OR
  - b) LDL-C > 400 mg/dL before any treatment AND at least one of the following:
    - i) Xanthoma before 10 years of age; and/or
    - ii) Evidence of heterozygous familial hypercholesterolemia (HeFH) in both parents; AND
4. Chart notes must include documentation of baseline LDL-C level, taken within the past 90 days; AND
5. Member is unable to achieve LDL-C goal (see Note) after an 8-week trial of a high-intensity/max-tolerated statin in combination with ezetimibe (unless there is documentation of clearly established statin intolerance or statin contraindication—see note\*); AND
6. Praluent will be used as an adjunct to other LDL-lowering therapies (e.g., statins, ezetimibe, LDL apheresis), unless contraindicated or intolerant; AND
7. Prescriber attests that the member will adhere to a diet regimen or diet modification.
8. **Dosage allowed/ Quantity Limit:** 150 mg (1 injection of 150 mg/mL) subcutaneously every 2 weeks (Limit: 2 injections per 28 days)

NOTE: The LDL-C goals for adults are <70 mg/dL or <55 mg/dL with additional ASCVD risk factors.

\*NOTE: *If not on statin therapy, member must have documented contraindication to all statin drugs or documentation of intolerance to at least 2 different statins, including low/moderate intensity or alternate dosing such as every other day.*

***If all the above requirements are met, the medication will be approved for 6 months.***

For **reauthorization**:

1. Chart notes/labs show at least 15% LDL-C reduction since starting Praluent.

***If all the above requirements are met, the medication will be approved for an additional 12 months.***

## **Heterozygous Familial Hypercholesterolemia (HeFH)**

For **initial** authorization:

1. Member is at least 8 years of age; AND
2. Medication must be prescribed by or in consultation with a lipid specialist, cardiologist, or endocrinologist; AND
3. Member has a diagnosis of heterozygous familial hypercholesterolemia (HeFH) confirmed by one of the following:
  - a) Genetic testing (presence of LDL-R, ApoB, or PCSK9 mutation)
  - b) (Adults only) Dutch Lipid Network score greater than 8 points
  - c) (Adults only) “Definite” per Simon Broome criteria (i.e., LDL > 190 at baseline AND tendon xanthoma OR LDL-R, ApoB, or PCSK9 mutation); AND
4. Member has a lipid panel within the past 90 days showing LDL of 100 or greater for adults or 130 or greater for pediatrics; AND
5. Member’s LDL is elevated despite at least a 3-month adherent trial of high intensity or max tolerated statin therapy in combination with ezetimibe (unless there is documentation of clearly established statin intolerance or statin contraindication—see note\*); AND
6. Praluent will be used in combination with a statin and/or ezetimibe, unless contraindicated or intolerant; AND
7. Prescriber attests that the member will adhere to a diet regimen or diet modification.
8. **Dosage allowed/Quantity Limit:** Administer subcutaneously.  
Adults: 75 mg (1 injection of 75 mg/mL) every 2 weeks OR 300 mg (2 injections of 150 mg/mL) every 4 weeks OR if inadequate, may adjust to 150 mg (1 injection of 150 mg/mL) every 2 weeks  
Pediatrics <50 kg: 150 mg every 4 weeks; if inadequate, may adjust to 75 mg every 2 weeks.  
Pediatrics 50 kg or more: 300 mg every 4 weeks; if inadequate, may adjust to 150 mg every 2 weeks.  
QL: 2 pens per 28 days

*\*Note: If not on statin therapy, member must have documented contraindication to all statin drugs or documentation of intolerance to at least 2 different statins, including low/moderate intensity or alternate dosing such as every other day.*

***If all the above requirements are met, the medication will be approved for 6 months.***

For **reauthorization**:

1. Chart notes along with recent labs have been provided showing a clinically meaningful reduction of LDL-C level from baseline OR LDL-C is at goal.

***If all the above requirements are met, the medication will be approved for an additional 12 months.***

## Primary Hyperlipidemia

For **initial** authorization:

1. Member is at least 18 years of age; AND
2. Member has a history of clinical atherosclerotic cardiovascular disease (ASCVD) (e.g., angina, coronary or other arterial revascularization, MI, stroke, transient ischemic attack, peripheral arterial disease, etc.); AND
3. Member has a lipid panel within the past 90 days showing one of the following:
  - a) LDL of 70 or greater
  - b) LDL of 55 or greater and “very high risk,” i.e., history of multiple major ASCVD events (acute coronary syndrome within past 12 months, history of MI, stroke, or symptomatic PAD) or 1 major ASCVD event and multiple high-risk conditions; AND
4. Member’s LDL is elevated despite at least a 3-month adherent trial of high intensity or max tolerated statin therapy in combination with ezetimibe (unless there is documentation of clearly established statin intolerance or statin contraindication—see note\*); AND
5. Praluent will be used in combination with a statin and/or ezetimibe, unless contraindicated or intolerant; AND
6. Prescriber attests that the member will adhere to a diet regimen or diet modification.
7. **Dosage allowed:** 75 mg (1 injection of 75 mg/mL) every 2 weeks OR 300 mg (2 injections of 150 mg/mL) every 4 weeks OR 150 mg (1 injection of 150 mg/mL) every 2 weeks  
(Limit: 2 injections per 28 days)

*\*Note: If not on statin therapy, member must have documented contraindication to all statin drugs or documentation of intolerance to at least 2 different statins, including low/moderate intensity or alternate dosing such as every other day.*

***If all the above requirements are met, the medication will be approved for 6 months.***

For **reauthorization**:

1. Chart notes along with recent labs have been provided showing a clinically meaningful reduction of LDL-C level from baseline OR LDL-C is at goal.

***If all the above requirements are met, the medication will be approved for an additional 12 months.***

**CareSource considers Praluent (alirocumab) not medically necessary for the treatment of conditions that are not listed in this document. For any other indication, please refer to the Off-Label policy.**

DATE	ACTION/DESCRIPTION
07/09/2020	New policy for Praluent created. Retired old Biologic Cholesterol Agents policy.
04/27/2021	New indication Homozygous Familial Hypercholesterolemia (HoFH) added. Updated atorvastatin high-intensity requirement to reflect pediatric vs. adult dosing.
02/22/2022	Policy for Praluent transferred to new template. Removed specialist requirement from ASCVD indication.
09/14/2023	Updated ACC non-statin reference. Added endocrinology as accepted specialist for HeFH, HoFH. Clarified Simon-Broome criteria for HeFH, noted pertinent gene mutations. Added detail to statin intolerance note regarding low/moderate intensity and alternate dosing. Renamed “Prevention of cardiovascular events” section to “Primary hyperlipidemia.” Differentiated LDL cutoff of 55 for “very high risk” population for primary hyperlipidemia.
03/12/2024	Updated references. Clarified renewal criteria to say <u>clinically</u> meaningful LDL reduction for HEFH and primary. HEFH: Changed age limit per label update; added peds dosing, added LDL eligibility value of 130 for peds. Clarified that Dutch score, Simon-Broome only for use in adults.

HOFH: Removed note for peds HoFH goal LDL to avoid confusion. Removed LDL cutoff for HEFH in parents. Changed LDL cutoffs of 500 or 300 to 400; specified at least 15% LDL reduction for reauth; changed LDL goals of 100 or 70 to 70 or 55; changed statin/ezetimibe trial from 90 days to 8 weeks (EAS/Cuchel 2023).
